

HISAB KITAB — Full Mobile App UI Design Prompt

WHO YOU ARE DESIGNING FOR

You are designing a mobile-first financial ledger app called **Hisab Kitab** (हिसाब किताब) for a Nepali furniture shop owner in his 50s. He is not a tech-savvy user — he uses WhatsApp and makes calls, but he has never used a finance app. He currently keeps all his records in a physical notebook, one page per person. The app must feel as familiar and simple as opening a notebook. Every screen must prioritize **readability**, **large touch targets**, and **clarity of numbers**. There should be zero unnecessary complexity.

The app is used at night, in low light, after a long day of physical work. The design must be calm, warm, and confidence-inspiring — not clinical or corporate.

VISUAL IDENTITY & DESIGN SYSTEM

App Name: Hisab Kitab **Tagline:** Aapka Hisaab, Aapke Haath Mein

Color Palette:

- Primary Brand Color: Deep Indigo (#3D3F8F) — used for headers, primary buttons, active states
- Accent / Action Color: Warm Saffron (#F4A228) — used for CTAs, FAB button, highlighted balances
- Success / Positive Balance: Forest Green (#2D7A4F)
- Danger / Negative Balance / Debt: Brick Red (#C0392B)
- Neutral / Settled: Slate Gray (#7F8C8D)
- Background: Soft Off-White (#F7F5F0) (warm, paper-like — not pure white)
- Card Surface: Pure White (FFFFFF)
- Text Primary: Near-Black (#1A1A2E)
- Text Secondary: Medium Gray (#6B7280)
- Dividers / Borders: (#E8E4DD)

Typography:

- Use a clean sans-serif font pair. Primary font: **Inter** or **Nunito** for UI labels. For currency/number display, use a monospaced or tabular-figures font so rupee amounts align

perfectly in lists.

- Heading sizes should be generous — minimum 18sp for section titles, 28–36sp for balance amounts.
- Numbers showing money must always be large, bold, and right-aligned.

Border Radius: Rounded corners throughout — 12px for cards, 24px for bottom sheets and modals, 50px for pill-shaped buttons and tags.

Shadows: Subtle, warm shadows on cards — `box-shadow: 0 2px 12px rgba(61, 63, 143, 0.08)`. Never harsh drop shadows.

Icons: Use a single consistent icon library (e.g., Phosphor Icons or Remix Icons). Icons should always be paired with a text label — never icon-only for primary actions, since the user is not tech-savvy.

Language: All UI labels should appear in both English and Nepali/Hindi where space allows. Example: "Add Entry / Aaj Ka Hisaab", "Settled / Hisaab Saaf". Balance status labels must be in simple Nepali: "Lena Hai" (to receive), "Dena Hai" (to give).

Bottom Navigation: The app uses a persistent bottom navigation bar with 4 tabs. Never use a hamburger menu — the user must always be able to see where they are.

COMPLETE PAGE INVENTORY

Design all of the following screens. Each screen description includes its purpose, all UI elements, states, and interaction notes.

SCREEN 1 — SPLASH SCREEN

Purpose: App launch screen shown for 1.5 seconds while the app initializes.

Design: Full-screen background in Deep Indigo (`#3D3F8F`). Centered logo — a stylized open notebook icon combined with a Nepali rupee symbol (₹), in white. Below the logo, the app name "Hisab Kitab" in large white bold text, and the tagline "हिसाब किताब" in a lighter weight below it. At the very bottom, a thin animated loading bar in Saffron (`#F4A228`) that fills left to right.

SCREEN 2 — ONBOARDING (3 slides, swipeable)

Purpose: Shown only on first install, before the login screen. Introduces the app in 3 simple slides.

Design Pattern: Full-screen illustration-based onboarding with a dot indicator, a "Skip" text button in the top right, and a large "Aage Badho →" (Next) button at the bottom. The last slide shows a "Shuru Karte Hain!" (Let's Begin!) CTA button in Saffron.

Slide 1 — "Apna Khata Digital Karo" Illustration: A warm, friendly illustration of a physical notebook transforming into a glowing smartphone screen. Text: "Kagaz ka jhanjhat khatam — ab hisaab rakho apne phone mein." (No more paper hassle — keep accounts on your phone.)

Slide 2 — "Har Insaan Ka Alag Khata" Illustration: Multiple colorful "pages" fanning out from a central notebook, each labeled with a person's name (Ram, Shyam, Ghar Kharcha). Text: "Ek-ek insaan ka alag account — bilkul apni copy ki tarah." (A separate account for each person — just like your own notebook.)

Slide 3 — "Hisaab Apne Aap Jodega" Illustration: A calculator with a checkmark, coins stacking up, numbers adding themselves. Text: "Jama aur Udhar automatic count hoga. Aapko sirf likhna hai." (Jama and Udhar will be counted automatically. You just need to write.)

SCREEN 3 — LOGIN SCREEN

Purpose: Returning user authentication. Entry point after onboarding or logout.

Design: Soft off-white background. At the top, the Hisab Kitab logo and name in medium size — not overwhelming, since this is a utility screen. Below, a warm welcome message: "Wapas aaye! / Welcome Back" in large friendly text.

Form Elements:

- Phone number input field with Nepal flag emoji and +977 prefix locked in, then an editable 10-digit field. Label: "Aapka Number / Your Phone"
- PIN input field showing 4-6 circular dots (like a passcode entry), not a regular text field. Label: "Aapka PIN"
- A "PIN bhool gaye?" (Forgot PIN?) text link below the PIN field in the accent color
- A large full-width primary button: "Login Karo" in Deep Indigo with white text

Below the form: A divider line with "ya" (or) centered on it, then a text link: "Naya account banao → Sign Up"

States to show: Default state, error state (wrong PIN — the dots shake and turn red with message "PIN galat hai, dobara try karein"), loading state (button shows spinner while API call is in progress).

SCREEN 4 — SIGN UP SCREEN

Purpose: New user registration. Simple, minimal — only essential fields.

Design: Same warm background as login. Top shows a back arrow to return to login. Title: "Naya Khata Banao / Create Account"

Form Elements (in order, top to bottom):

- Full Name field. Label: "Aapka Naam / Your Name". Placeholder: "e.g., Ramesh Bahadur"
- Phone number field (same pattern as login with +977 prefix)
- PIN creation field — circular dot input. Label: "PIN Chunein (4-6 numbers) / Choose PIN"
- Confirm PIN field. Label: "PIN Dobara Daalo / Confirm PIN"
- A large primary CTA button: "Account Banao → / Create Account"

States to show: Default state, mismatched PIN error state (confirm PIN dots turn red, message: "PIN match nahi kiya"), success state (brief green checkmark animation before redirecting to the home screen).

SCREEN 5 — HOME SCREEN (Main Dashboard)

Purpose: The most important screen. Shows all open Khatas as cards sorted by outstanding balance. This is what the father sees every time he opens the app.

Layout Structure:

Header: A colored header bar in Deep Indigo. Left side: greeting "Namaste, Ramesh ji 🙏" in white. Right side: a circular search icon button and a notification/profile icon.

Summary Strip: Directly below the header (overlapping it slightly, creating a card-lift effect) is a wide horizontal summary card in white with a subtle shadow. It shows three numbers in a row: "Lena Hai" (total others owe you) in green, "Dena Hai" (total you owe others) in red, and "Net Balance" in either green or red depending on sign. Each number should be large, bold, and in its respective color with the Rs symbol.

Section Heading: "Aapke Khate / Your Accounts" with a small count badge showing total open Khatas.

Khata Card List (vertical scroll): Each Khata appears as a card. Design each card to contain: a colored left border strip (green = positive balance, red = negative, gray = zero), the Khata title in bold large text (e.g., "Ram Khata"), a subtitle line showing the party's phone number or a small tag like "Personal" or "Expense Account", the current balance displayed prominently on the right side in large bold text with its color (green/red), a small secondary line below the balance showing "Lena Hai" or "Dena Hai" in plain text, and at the very bottom of the card in a lighter color, the date of the last entry ("Aakhri entry: 3 din pehle").

Floating Action Button (FAB): A large circular button in Saffron ( #F4A228) fixed at the bottom right, above the navigation bar. Icon: a plus sign with a pencil. Tapping it opens the "New Khata" bottom sheet. This is the #1 most important interactive element — make it impossible to miss.

States to show: Loaded state with 4–6 sample Khata cards, empty state (no Khatas yet) showing a friendly illustration of an empty notebook with text "Koi khata nahi hai abhi. Pehla khata banao!" and a CTA button.

Bottom Navigation Bar: 4 tabs — Home (घर, active), Reports (रिपोर्ट), Settled (साफ खाते), Settings (सेटिंग्स). The active tab icon fills in solid with the brand color; inactive tabs are gray outlines.

SCREEN 6 — KHATA DETAIL SCREEN

Purpose: Shows the full history of one Khata — every entry in reverse chronological order, with the running balance visible at the top. This mirrors the father's single notebook page for one person.

Layout Structure:

Header: Back arrow on left, Khata title in center (e.g., "Ram Khata"), and a three-dot overflow menu on the right with options: Edit Khata, Settle Khata, View Party Info.

Balance Hero Card: A large prominent card at the top (not scrollable — it stays fixed while the entry list scrolls). Background: Deep Indigo. Shows in large white text: the person's name, the balance amount (very large, 36sp+), and below it "Lena Hai" in green or "Dena Hai" in red. Also shows two smaller figures side by side: "Total Jama Rs—" and "Total Udhar Rs—".

Entry List (scrollable): Below the hero card, a vertical list of all entries grouped by month. Each month starts with a sticky month-year label (e.g., "Baishakh 2082 · May 2025") as a section header.

Each entry row contains: the date on the left (day number large, month abbreviation small below it), in the center the note text (if any, shown in gray italics) and a small direction tag ("Jama" in green pill or "Udhar" in red pill), and on the right the amount in large bold text in the direction's color. Below each row, a very small running balance line: "Balance: Rs 2,300" in gray text.

Floating Action Button: Same Saffron FAB, but now labeled "Entry Jodo +" — tapping opens the Add Entry bottom sheet.

Empty state: If no entries yet, show a friendly illustration of a blank lined page with text: "Abhi koi entry nahi. Aaj ka hisaab daalo!" and a CTA button.

States to show: Loaded with 6–8 sample entries across 2 months, the Settled state (where the FAB is hidden, the balance card has a gray "Hisaab Saaf ✓" banner across it, and a "Re-Open" text button appears).

SCREEN 7 — ADD ENTRY BOTTOM SHEET

Purpose: The fastest possible way to record one financial event. This is used 10+ times per day, so every element must be optimized for speed.

Design Pattern: This appears as a bottom sheet that slides up from the bottom of the Khata Detail screen. It covers approximately 65% of the screen. It has a rounded top with a drag handle at the top center. The background behind it is dimmed.

Layout (top to bottom inside the sheet):

Title: "Aaj Ka Hisaab / Today's Entry" in bold.

Direction Selector (most important field — shown first and largest): Two large full-width toggle buttons side by side, styled like segmented control but much larger. Left button: "Diya / Udhar" (money went OUT) with a red upward arrow icon. Right button: "Liya / Jama" (money came IN) with a green downward arrow icon. The selected one fills with its color (red or green), unselected is outlined only. These buttons should be at least 64dp tall — easy to tap.

Amount Field: A large number input field, centered, showing a Rs symbol prefix. The number itself should render at 32sp — large and unmissable. Auto-focus and open the numeric keypad when the sheet appears.

Date Field: A row with a calendar icon, showing "Aaj / Today" as default with the actual date next to it in gray. Tapping opens a simple date picker. The field should make it easy to confirm "yes, today" without making the user tap multiple times.

Note Field: A single-line optional text input. Label: "Note (optional) / Koi Baat?" Placeholder: "e.g., chai-paani, salary advance...". This field should be clearly marked as optional.

Save Button: A large full-width button in Deep Indigo: "Save Karo / Save Entry". Below it in small gray text: the preview of what will be saved: "Rs 500 ka Udhar — Ram ko diya — Aaj".

States to show: Default (Udhar selected, empty amount), filled state ready to save, success state (sheet closes and a green toast notification appears: "Entry save ho gayi ✓").

SCREEN 8 — NEW KHATA BOTTOM SHEET

Purpose: Create a new account page. Shown when the FAB on the home screen is tapped.

Design Pattern: Same bottom sheet pattern as Add Entry, covering ~70% of the screen.

Layout:

Title: "Naya Khata Banao / New Account"

Khata Type Selector: Two large illustrated option cards side by side. Left card: "Insaan Ka Khata / Personal Account" with a person icon — for tracking money with Ram, Shyam, an employee. Right card: "Kharcha Ka Khata / Expense Account" with a wallet icon — for tracking a category of expenses like Ghar Kharcha or Bijli Bill. The selected card has a colored border and a checkmark.

Khata Title Field: Text input. Label: "Naam / Name". Placeholder changes based on type: "e.g., Ram Khata" for personal, "e.g., Ghar Kharcha" for expense account.

Party Selector (only visible when Personal Account type is selected): A searchable dropdown or picker that shows existing parties. If the person doesn't exist yet, a "+ Naya Insaan Jodo" (Add New Person) option appears at the bottom of the list, which expands to reveal Name and Phone fields inline.

Create Button: Full-width primary button: "Khata Banao → / Create Account"

SCREEN 9 — SEARCH SCREEN

Purpose: Find any Khata or entry by name or note content. Accessible from the search icon in the home screen header.

Design: Full-screen takeover (not a modal). Animated transition: the search icon in the header expands into a full-screen search bar. The keyboard appears immediately.

Layout:

Search Bar: Full-width at the top, with a back arrow on the left to dismiss, the text input in the center with placeholder "Khojo... / Search...", and a clear (×) button on the right when text is present.

Before typing — Recent Searches: A section titled "Haal Ki Searches / Recent" showing the last 3 searches as tappable chips.

While typing — Live Results: Results appear as the user types, split into two sections: "Khate / Accounts" (matching Khata titles) and "Entries" (matching entry notes). Each result shows the Khata name, the matching text highlighted in saffron color, and the balance or amount. Tapping a result navigates directly to that Khata or highlights that entry.

No results state: A friendly illustration with text "Kuch nahi mila. Dobara try karein." (Nothing found. Try again.)

SCREEN 10 — REPORTS SCREEN (Monthly Summary)

Purpose: Give the father a one-page overview of any month. Accessed via the bottom navigation Reports tab.

Layout:

Month Selector: A horizontal pill-based month switcher at the top. Shows 3 months: previous, current (highlighted in Deep Indigo), next. Left/right arrows to navigate further back. The current month defaults to selected.

Summary Cards Row: Three horizontal cards showing: "Kul Udhar / Total Given Out" in red, "Kul Jama / Total Received" in green, "Net Cash Flow" in green or red depending on sign. Each card has the label, a large rupee amount, and a small icon.

Outstanding Balances Section: Title: "Abhi Tak Baaki / Still Outstanding". Two sub-sections:

Sub-section "Aapko Milna Hai" (People who owe you): A list of Khata cards in compact form, sorted by balance descending. Each row shows the person's name, their balance in green, and a small progress indicator showing how much they've paid vs the original amount.

Sub-section "Aapko Dena Hai" (People you owe): Same design but in red.

If no outstanding balances: A celebratory illustration with text "Sab hisaab saaf! 🎉" (All accounts clear!)

SCREEN 11 — SETTLED KHATAS SCREEN

Purpose: Archive of closed accounts. Accessed from the bottom navigation "Saaf Khate" tab.

Design: Same card layout as the home screen, but cards are rendered in muted gray tones with a "Hisaab Saaf ✓" green badge in the top right corner of each card. The balance is shown in gray (not green/red) since it's settled. Tapping a settled Khata opens its detail screen in read-only mode. A "Re-Open" button is visible in the detail screen.

Empty state: A clean illustration of a cleared, lined notebook page: "Abhi tak koi khata settle nahi hua." (No accounts settled yet.)

SCREEN 12 — SETTINGS SCREEN

Purpose: App configuration. Accessed from the bottom navigation Settings tab.

Design: Standard settings list layout with grouped sections.

Section: Account (Mera Account)

- Profile row: Shows avatar (initials-based, in Deep Indigo), name, and phone number. Tapping opens an edit profile screen.
- Change PIN row with a lock icon.

Section: App (App Settings)

- Language toggle: Nepali / Hindi / English (segmented control)
- Theme toggle: Light / Dark (for future, show it as "Jald Aane Wala... / Coming Soon" with a grayed-out toggle)
- Currency Display: NPR Rs (locked, shown as non-interactive informational row)

Section: Data (Data)

- A row: "Apna Data Export Karo / Export Data" — marked as "Coming Soon" with a gray badge

Section: About

- App version
 - Privacy Policy (tappable, opens web view)
 - "Logout / Bahar Jaao" — shown in Brick Red to signal a destructive action, with a logout icon. Tapping shows a confirmation dialog: "Kya aap logout karna chahte hain?" with Cancel and Logout buttons.
-

SCREEN 13 — PARTY DETAIL / PROFILE SCREEN

Purpose: View and edit information about a specific person (party). Accessed from the three-dot menu on a Khata detail screen.

Design: A profile-style screen. At the top, a large circular avatar with the person's initials in Deep Indigo on a light indigo background. Below: the person's name in large text, their phone number as a tappable link (opens dialer), and an Edit button.

Below the profile card: a list of all Khatas linked to this person, shown as compact cards. This lets the father see all of Ram's accounts in one place if there are multiple.

SCREEN 14 — SETTLE KHATA CONFIRMATION SCREEN / MODAL

Purpose: Confirmation before settling a Khata. This is a destructive/final action, so it warrants its own screen treatment.

Design: A centered modal dialog (not a full screen). It has: a large circular icon at the top — a handshake or checkmark in green, the title "Hisaab Saaf Karna Hai? / Settle This Account?", the Khata name and final balance shown prominently, a summary: "Iske baad is khate mein koi nayi entry nahi ho sakti." (After this, no new entries can be added to this account.), two buttons —

"Ruk Jao / Cancel" as an outlined secondary button, and "Haan, Saaf Karo / Yes, Settle" as a filled green primary button.

SCREEN 15 — ERROR & EMPTY STATES (Global)

Design the following utility states that appear throughout the app:

Server Waking Up State: Since the backend on Render's free tier sleeps after inactivity, show a friendly full-screen loading state (only on first load after inactivity) with a sleepy moon illustration and text: "Thoda ruko... server jaag raha hai. (30 seconds)" with an animated progress bar.

No Internet State: A disconnected plug illustration with text: "Internet nahi mila. Check karein aur dobara try karein." and a "Retry" button.

Generic Error State: A confused calculator illustration with text: "Kuch toh gadbad hai... dobara try karein." and a Retry button.

DESIGN DELIVERABLES EXPECTED

Please design all 15 screens above as high-fidelity mobile UI mockups in a 390×844px frame (iPhone 14 / standard Android size). Deliver:

1. All screens in their default/loaded state
2. Key screens (Login, Home, Khata Detail, Add Entry) in their empty and error states as well
3. A component reference sheet showing: color palette swatches, typography scale, button variants (primary, secondary, danger, disabled), input field variants (default, focused, error), card variants (positive balance, negative balance, settled), and the bottom navigation bar
4. All text in dual language where specified (Nepali/Hindi + English)
5. Follow a consistent 8px spacing grid throughout

The overall feel should be: **warm, trustworthy, simple, and South Asian in cultural flavor** — not a generic fintech app. Think of the warmth of a family register (bahi-khata) translated into a clean modern interface. The father should look at this app and feel "this was made for someone like me."
